1 **I. INTRODUCTION**

2 Samsung¹ cannot show that claims 1 and 4 of U.S. Patent No. 5,545,592 (“’592”) are
 3 anticipated because the allegedly anticipatory reference does not expressly or inherently disclose
 4 the claimed step of “exposing said metal silicide layer to nitrogen ionized in a plasma...”
 5 Samsung cannot show obviousness because Samsung did not provide admissible evidence on any
 6 of the fact questions underlying obviousness. Therefore, Plaintiffs Advanced Micro Devices, Inc.
 7 and ATI Technologies ULC, Inc. (collectively “AMD”) oppose Samsung’s Motion for Summary
 8 Judgment (“Samsung’s Motion”). Because Samsung, who bears the burden of proving invalidity
 9 by clear and convincing evidence, cannot establish that Hillman U.S. Patent No. 5,975,912
 10 (“’912”) anticipates or renders obvious the asserted Iacoponi ’592 patent claims, Samsung’s
 11 Motion must be denied.

12 **II. STATEMENT OF ISSUES TO BE DECIDED**

13 Whether there is a genuine dispute as to the following issues:

14 1. Whether the process described at 15:29-37 of Hillman ’912 expressly discloses the
 15 Iacoponi ’592 patent’s claimed step of “exposing said metal silicide layer to nitrogen ionized in a
 16 plasma.”

17 2. Whether the process described at 15:29-37 of Hillman ’912 always results in a
 18 metal silicide being exposed to nitrogen ionized in a plasma.

19 3. Whether the process described at 3:47-58 of Hillman ’912 expressly discloses each
 20 and every step of ’592 claims 1 or 4.

21 4. Whether the process described at 3:47-53 of Hillman ’912 always results in a
 22 metal silicide being exposed to nitrogen ionized in a plasma.

23 5. Whether the disclosures of columns 3 and 15 of Hillman ’912 are sufficiently
 24 linked that one of ordinary skill in the art would understand them to apply to the same process.

25
 26 ¹ “Samsung” refers collectively to defendants Samsung Electronic Co., Ltd., Samsung
 27 Semiconductor, Inc., Samsung Austin Semiconductor, LLC, Samsung Electronics America, Inc.,
 28 Samsung Telecommunications America, LLC, Samsung Techwin Co., Ltd., and Samsung Opto-
 Electronics America, Inc.

1 6. Whether the combination of the processes described at 15:29-37 and 3:47-53 of
2 Hillman '912 expressly discloses each and every step of '592 claims 1 or 4.

3 7. Whether the combination of the processes described at 15:29-37 and 3:47-53 of
4 Hillman '912 inherently discloses each and every step of '592 claims 1 or 4.

5 8. Whether Samsung provided admissible evidence to clearly and convincingly
6 establish each fact underlying its obviousness defense.

7 **III. FACTUAL BACKGROUND**

8 **A. The Technology of the '592 Patent**

9 The Iacoponi '592 patent teaches a novel method for fabricating contacts in
10 semiconductors. Contacts supply voltage to the source and drain of a transistor. *See* Declaration
11 of Alexander Glew ("Glew Decl.") ¶9. Contacts are typically made of layers of different
12 materials. *Id.* The Iacoponi invention focuses on the use of three separate materials: titanium
13 silicide, titanium nitride, and tungsten. *See* Glew Decl. ¶10.

14 The Iacoponi '592 patent uses terms that have clear meaning to one of ordinary skill in the
15 art. *See* Glew Decl. ¶11. For example, Iacoponi refers to a "semiconductor body." *See* '592 at
16 4:34-35, attached as Ex. 1 to the Declaration of Jacob Zimmerman ("Zimmerman Decl"). A
17 semiconductor body is generally understood as the silicon wafer on which semiconductors are
18 fabricated. *See* Glew Decl. ¶11. The semiconductor body is the foundation in and on which
19 transistors and other devices are built. *Id.*

20 Iacoponi discusses the use of several metals, including titanium and tungsten. *See* '592 at
21 1:26, 4:28-30. One of ordinary skill understands that in the context of semiconductor fabrication,
22 a "metal" is different than metallic compounds like metal silicides or metal nitrides. *See* Glew
23 Decl. ¶12. Unlike a metal, a "metal silicide" is a compound made up of a metal (such as
24 titanium) combined with silicon. *See* Glew Decl. ¶13; *see also* '592 at 1:32-34. There are several
25 ways to make a metal silicide during semiconductor fabrication. *See* Glew Decl. ¶14. Iacoponi
26 describes and claims one method, which describes depositing titanium on a silicon substrate, and
27 then subjecting the device to an anneal. *See* '592 at 1:32-34, 4:52-55 (claim 3). An "anneal" is a
28 process which exposes the wafer to high temperatures. *See* Glew Decl. ¶15. High temperatures

1 can enable and speed up chemical reactions. *Id.* The final material composition resulting from
2 any given anneal depends upon the material that is being annealed, the annealing atmosphere, the
3 annealing time, and the annealing temperature. *See* Glew Decl. ¶15. For example, the anneal
4 described in the Iacoponi patent causes silicon to diffuse (or “migrate”) from the substrate into the
5 layer of titanium to form titanium silicide. *See id.*; *see also* Glew Decl. Ex. A.

6 A “metal nitride” is a compound made up of a metal (*e.g.*, titanium) combined with
7 nitrogen atoms. *See* ’592 at 3:54-57; Glew Decl. ¶17. There are several ways to make titanium
8 nitride during semiconductor fabrication. *See* Glew Decl. ¶17. Iacoponi ’592 describes two
9 different techniques. One way is to convert titanium silicide into titanium nitride by plasma
10 nitridation. ’592 at 3:30-43; *see also* Glew Decl. ¶17. Plasma nitridation is the process of
11 converting a metal (*e.g.*, titanium) or metal compound (*e.g.*, titanium silicide) into a metal nitride
12 using a plasma. *See* Glew Decl. ¶16. Plasma nitridation only converts a thin portion starting at
13 the surface. *Id.*

14 A “plasma” is partially ionized gas that is electrically conductive and that responds to
15 magnetic fields. *See* Glew Decl. ¶18; *see also* Declaration of Michael Thomas in Support of
16 Samsung’s Motion for Summary Judgment (Dkt. #144) (“Thomas Decl.”) at ¶10. “Partially
17 ionized” means that some of the gas molecules are missing electrons or have extra electrons. *See*
18 Glew Decl. ¶18. Ionized molecules tend to be more reactive than regular molecules. *Id.* During
19 plasma nitridation, ionized nitrogen bonds with titanium to form titanium nitride. *Id.*

20 Iacoponi also describes using a process of depositing a layer of titanium nitride using a
21 process called chemical vapor deposition (“CVD”). *See* ’592 at 4:1-6; *see also* Glew Decl. ¶19.
22 This process combines various gases in a chemical reaction that causes titanium nitride to form on
23 the surface of the device. *See* Glew Decl. ¶19. One of ordinary skill understands that *depositing*
24 titanium nitride is fundamentally different than using a plasma to *convert* titanium to titanium
25 nitride. *Id.*

26 AMD has asserted two ’592 patent claims against Samsung: claims 1 and 4. Claim 1 of
27 the ’592 patent is a method claim that recites the following limitations:

28 A method for forming a contact to a semiconductor body, said

28

method comprising the steps of:
 forming a metal silicide layer on said body;
 exposing said metal silicide layer to nitrogen ionized in a plasma,
 thereby converting a portion of said metal silicide layer to a first
 metal nitride layer;
 depositing a layer of a second metal nitride over said metal silicide
 layer, such that said second metal nitride layer overlays and
 engages said first metal nitride layer; and
 depositing a layer of a second metal over said second metal nitride
 layer.

'592 at claim 1. Claim 4 depends from claim 1 and adds limitations where the metal silicide layer is titanium silicide, and the second metal nitride layer is titanium nitride. '592 at claim 4.

The following excerpts from Dr. Glew's Declaration graphically depict Iacoponi's claimed process:

Iacoponi's first method step is to form a metal silicide layer, such as titanium silicide, on a semiconductor body. See '592 at 4:34-36; Glew Decl. ¶23.

25
26
27
28

The next step is to expose the titanium silicide layer to nitrogen ionized in a plasma. *See* '592 at 4:37-38; Glew Decl. ¶24. As is explained in section V below, this critical step is missing from the Hillman '912 disclosure.

As a result of the exposure to a plasma, a thin portion at the top of the titanium silicide layer is converted to titanium nitride—the “first metal nitride” of claim 1. *See* '592 at 4:38-39; Glew Decl. ¶25.

The third step is to deposit a layer of titanium nitride on top of the first layer of titanium nitride. This is the “second metal nitride” described in claim 1. *See* '592 at 4:40-43; Glew Decl. ¶26.

1 The fourth and final step is to deposit a layer of metal,
2 such as tungsten, on top of the second layer of titanium nitride.

3 See '592 at 4:44-45; Glew Decl. ¶27.

4
5
6
7
8 In addition to these drawings, Exhibit A to Dr. Glew's Declaration includes a short
9 animation depicting the methods recited in these claims. See Glew Decl. Ex. A. That animation
10 is useful because this is a method patent, and the difference between Iacononi's method and the
11 Hillman patent are not easily depicted in still drawings. Therefore, AMD respectfully requests
12 that the Court view the short animation.

13
14
15 The terms of the Iacononi claims are relatively straightforward. Neither party identified
16 any terms needing construction during the process leading up to the *Markman* hearing. While the
17 parties now disagree about whether the preamble to claim 1 is limiting, it does not appear that
18 there are any disputes regarding claim scope that impact the outcome of Samsung's Motion on
19 anticipation.²

20 **B. Hillman '912 Patent**

21 Hillman '912 is one of a series of Hillman patents that describes a manufacturing tool for
22 use in the fabrication of semiconductor devices. See Glew Decl. ¶28. In particular, Hillman '912

23 ² Samsung has argued that the preamble to claim 1 is not a limitation. AMD disagrees. The
24 preamble supplies the antecedent basis for the term "said body" in the first method step. As such,
25 the preamble is limiting. See *Catalina Mktg. Int'l, Inc. v. Coolsavings.com*, 289 F.3d 801, 808
26 (Fed. Cir. 2002) ("[D]ependence on a particular disputed preamble phrase for antecedent basis
27 may limit a claim scope because it indicates a reliance on both the preamble and claim body to
28 define the claimed invention."). That said, determination of this construction does not impact
AMD's opposition to Samsung's anticipation defense because, for purposes of this motion, AMD
does not dispute that Hillman's column 15 process describes forming a contact to a
semiconductor body.

1 discloses a tool that can be used to create various layers during the fabrication of semiconductor
2 devices, by using a combination of CVD, plasma, high temperature anneal, rotation, and other
3 techniques. *See* Glew Decl. ¶28; *see* '912 at 4:10-6:54 (Zimmerman Decl. Ex. 2).

4 Hillman '912 describes many different fabrication processes—some of which have
5 nothing to do with fabrication of contacts to a semiconductor body. *See, e.g.*, '912 at claim 2
6 (describing deposition of thin film on aluminum); *see also* Glew Decl. ¶29 (noting that aluminum
7 is a conductor, not a semiconductor). Samsung has focused on two processes, described in
8 columns 3 and 15 of the Hillman '912 patent. *See* Samsung's Motion at 6, 9. Those portions of
9 Hillman's specification use a number of terms of art that do not appear in the Iacoponi patent.

10 One relevant term used by Hillman '912 is “ammonia plasma anneal.” *See* '912 at 15:32.
11 An “ammonia plasma anneal” is very different from the nitrogen plasma technique disclosed in
12 Iacoponi '592. *See* Glew Decl. ¶33. An ammonia plasma anneal subjects the exposed top surface
13 to ionized nitrogen molecules at the same time as it exposes the entire device to a high-
14 temperature in an ammonia atmosphere. *See id.*; *see also* Glew Ex. A (depicting animated
15 ammonia plasma anneal process). Thus, an ammonia plasma anneal combines two different
16 fabrication processes: (1) an anneal and (2) a nitrogen plasma.

17 It is important to understand that the combination of these two processes does not mean
18 that the chemical reactions take place at the same time or the same rate. *See* Glew Decl. ¶34. A
19 plasma causes a very rapid chemical reaction in a very thin portion of the top surface of the
20 device. *See id.* An anneal also causes chemical reactions, but an anneal is slower than a plasma.
21 *See id.* Unlike a plasma, an anneal impacts all layers, not just the exposed portion of the top
22 surface. *See id.*

ROBINS, KAPLAN, MILLER & CIRESI L.L.P.
ATTORNEYS AT LAW
MINNEAPOLIS

1 The following excerpts from Dr. Glew’s Declaration depict the process steps described in
2 Column 15 of the Hillman ’912 patent:

3 “An integrated contact metalization process can be used
4 by first depositing titanium onto a silicon surface by PECVD.”
5 Hillman ’912 at 15:29-30; *see* Glew Decl. ¶36.

6
7
8
9 “This will form a layer of titanium silicide.” Hillman ’912 at 15:31. Hillman’s Abstract
10 explains that titanium silicide will form at
11 the “junction” between the silicon and the
12 titanium during PE-CVD (plasma-enhanced
13 CVD) deposition of titanium. *See* Hillman
14 at Abstract; *see* Glew Decl. ¶¶32, 37, 49-50.

15 Thus, this portion of the column 15
16 disclosure tells one of ordinary skill that the titanium silicide that forms during Hillman’s
17 titanium deposition will be covered by elemental titanium. *See* Glew Decl. ¶37.

18 “After the titanium deposition an ammonia plasma anneal is performed to provide an
19 upper layer of nitrated silicide titanium.”

20 Hillman ’912 at 15:31-33. As the drawing
21 on the right depicts, the initiation of
22 Hillman’s plasma converts the top of the
23 titanium layer to titanium nitride almost
24 immediately. *See* Glew Decl. ¶38.

24
25
26
27
28

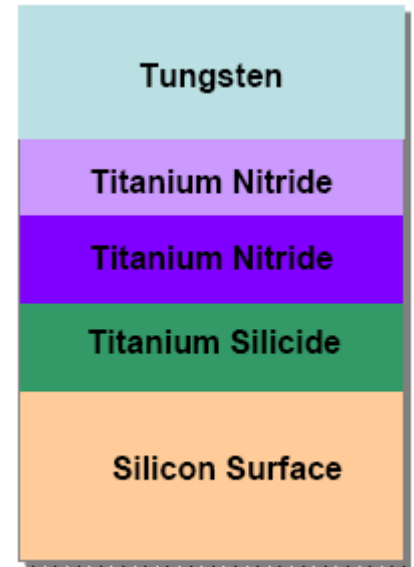

Meanwhile, the anneal causes silicon molecules to migrate from the silicon layer into the titanium. *See* Glew Decl. ¶¶15, 39. This silicon migration is much slower than the plasma reaction. *See* Glew Decl. ¶39. Depending on the anneal temperature and duration, three different outcomes are possible. First, the silicon might migrate completely through the remaining elemental titanium layer, up to the bottom of the titanium nitride, as depicted in the illustration on the right. *See id.* Second, the silicon can migrate part way through the titanium, leaving a layer of elemental titanium between the layers of titanium silicide and titanium nitride. *See id.* Third, if the anneal temperatures are high enough, the silicon can migrate all the way through the titanium and into the titanium nitride. *See id.*

Hillman’s next step is to deposit a second layer of titanium nitride. “Finally, a titanium nitride layer can be deposited by PECVD, again in the same reaction chamber.” Hillman ’912 at 15:33-35; *see* Glew Decl. ¶40.

1 “Finally, following the deposition of the titanium nitride,
2 aluminum or tungsten metal can be sputter deposited.” Hillman
3 ’912 at 15:35-37; *see* Glew Decl. ¶41.

4
5
6
7
8
9
10 The timing of Hillman’s fabrication processes relative to each other are critically important. *See*
11 Glew Decl. ¶34. The timing cannot easily be depicted in still drawings, but is depicted in the
12 animation attached as Ex. A to Dr. Glew’s Declaration.

13 **IV. LEGAL STANDARDS**

14 **A. Legal Standard For Anticipation**

15 Samsung has moved for summary judgment that the ’592 patent is anticipated by Hillman
16 ’912. “Anticipation must be proved by clear and convincing evidence.” *Electro Med. Sys., S.A.*
17 *v. Cooper Life Scis., Inc.*, 34 F.3d 1048, 1052 (Fed. Cir. 1994) (citations omitted).

18 A prior art reference anticipates a claim if and only if it describes each and every
19 limitation recited in the patent claim. *See* 35 U.S.C. § 102; *see also Trintec Indus., Inc. v. TOP-*
20 *U.S.A. Corp.*, 295 F.3d 1292, 1295 (Fed. Cir. 2002). The disclosures must be sufficiently detailed
21 as to place a person of ordinary skill in possession of the invention. *Sanofi-Synthelabo v. Apotex,*
22 *Inc.*, 550 F.3d 1075, 1082 (Fed. Cir. 2008) (citations omitted).

23 An anticipating reference “must not only disclose all elements of the claim within the four
24 corners of the document, but must also disclose those elements ‘arranged as in the claim.’” *Net*
25 *MoneyIN, Inc. v. VeriSign, Inc.*, 545 F.3d 1359, 1369 (Fed. Cir. 2008) (quoting *Connell v. Sears,*
26 *Roebuck & Co.*, 722 F.2d 1542, 1548 (Fed. Cir. 1983)). In particular, where a reference includes
27 multiple disclosures, “[the] reference must clearly and unequivocally disclose the claimed
28

1 [invention] or direct those skilled in the art to the [invention] without any need for picking,
2 choosing, and combining various disclosures not directly related to each other by the teachings of
3 the cited reference.” *Sanofi-Synthelabo*, 550 F.3d at 1083 (quoting *In re Arkley*, 455 F.2d 586,
4 587 (C.C.P.A. 1972)).

5 “[A] prior art reference may anticipate without disclosing a feature of the claimed
6 invention if that missing characteristic is necessarily present, or inherent, in the single anticipating
7 reference.” *Schering Corp. v. Geneva Pharms., Inc.*, 339 F.3d 1373, 1377 (Fed. Cir. 2003) (citing
8 *Continental Can Co. USA, Inc. v. Monsanto Co.*, 948 F.2d 1264, 1268 (Fed. Cir. 1991)). “The
9 mere fact that a certain thing *may result* from a given set of circumstances is insufficient to prove
10 anticipation.” *Electro Med. Sys.*, 34 F.3d at 1052 (quoting *Continental Can Co.*, 948 F.2d at
11 1268-69)) (emphasis in original). “Inherent anticipation requires that the missing descriptive
12 material is ‘necessarily present,’ not merely probably or possibly present, in the prior art.”
13 *Trintec Indus.*, 295 F.3d at 1295 (citing *In re Robertson*, 169 F.3d 743, 745 (Fed. Cir. 1999)).

14 **B. Legal Standard For Obviousness**

15 A patent claim is invalid when “the differences between the subject matter sought to be
16 patented and the prior art are such that the subject matter as a whole would have been obvious at
17 the time the invention was made to a person having ordinary skill in the art to which said subject
18 matter pertains.” 35 U.S.C. § 103. The question of “[o]bviousness is a question of law premised
19 on underlying findings of fact.” *Eolas Techs. Inc. v. Microsoft Corp.*, 399 F.3d 1325, 1332 (Fed.
20 Cir. 2005), *cert. denied*, 546 U.S. 998 (2005) (citing *Graham v. John Deere Co.*, 383 U.S. 1, 17-
21 18 (1966)). These underlying fact questions include (1) the level of ordinary skill in the art (2); a
22 determination of the scope and content of the prior art; and (3) differences between the prior art
23 and the claims at issue. *See KSR Int’l Co. v. Teleflex Inc.*, 550 U.S. 398, 427 (2007); *see also*
24 *Graham*, 383 U.S. at 17. In addition to the *Graham* factors, the Court in *KSR* stated that a proper
25 obviousness analysis considers:

1 interrelated teachings of multiple patents; the effect of demands
 2 known to the design community or present in the marketplace; and
 3 the background knowledge possessed by a person having ordinary
 4 skill in the art, all in order to determine whether there was an
 5 apparent reason to combine the known elements in the fashion
 6 claimed by the patent at issue.

7 *KSR*, 550 U.S. at 401, quoted in *ACCO Brands, Inc v. PC Guardian Anti-Theft Prods.*, 592 F.
 8 Supp. 2d 1208, 1220 (N.D. Cal. 2008).

9 **C. Legal Standard For Summary Judgment Of Invalidity**

10 Samsung is moving for summary judgment on anticipation and obviousness. Therefore,
 11 Samsung, as the moving party, bears the initial burden of demonstrating the absence of a genuine
 12 issue of material fact. *See Celotex Corp. v. Catrett*, 477 U.S. 317, 323 (1986). Samsung bears
 13 the burden of proof on both of these issues at trial. Therefore, Samsung must “present evidence
 14 that, if uncontroverted at trial, would entitle it to prevail on that issue.” *Monolithic Power Sys.,*
 15 *Inc. v. O2 Micro Int’l, Ltd.*, 476 F. Supp. 2d 1143, 1149 (N.D. Cal. 2007) (citing *UA Local 343 v.*
 16 *Nor-Cal Plumbing, Inc.*, 48 F.3d 1465, 1471 (9th Cir. 1994)).

17 If Samsung meets its initial burden, the burden of production then shifts to AMD to “set
 18 forth, by affidavit or as otherwise provided in Rule 56, ‘specific facts showing that there is a
 19 genuine issue for trial.’” *See T.W. Elec. Serv., Inc., v. Pac. Elec. Contractors Ass’n*, 809 F.2d
 20 626, 630 (9th Cir. 1987) (quoting Fed. R. Civ. P. 56(e)). A dispute is “genuine” if there is
 21 sufficient evidence for a reasonable jury to return a verdict for the nonmoving party. *Anderson v.*
 22 *Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986). A dispute is “material” if it could affect the
 23 outcome under the governing law. *Id.* “In a patent case, as in any other, summary judgment may
 24 be granted when there are no disputed issues of material fact, or when the non-movant cannot
 25 prevail on the evidence submitted when viewed in a light most favorable to it.” *Knoll Pharm.*
 26 *Co., Inc. v. Teva Pharms. USA, Inc.*, 367 F.3d 1381, 1384 (Fed. Cir. 2004) (citations omitted).

27 The Supreme Court has stated that “in ruling on a motion for summary judgment, the
 28 judge must view the evidence presented through the prism of the substantive evidentiary burden.”
Anderson, 477 U.S. at 254. Here, Samsung bears the burden to prove invalidity by clear and
 convincing evidence. *See* 35 U.S.C. § 282; *see also U.S. Gypsum Co. v. Nat’l Gypsum Co.*, 74

1 F.3d 1209, 1212 (Fed. Cir. 1996). “Clear and convincing” evidence has been described as
 2 evidence which produces in the mind of the trier of fact “an abiding conviction that the truth of
 3 [the] factual contentions are ‘highly probable.’” *Buildex, Inc. v. Kason Indus., Inc.*, 849 F.2d
 4 1461, 1463 (Fed. Cir. 1988) (citations omitted).

5 **V. HILLMAN DOES NOT ANTICIPATE THE IACOPONI ’592 PATENT**

6 Hillman ’912 does not anticipate Iacoponi ’592 claims 1 or 4 because Hillman does not
 7 disclose all of the steps of the asserted ’592 claims. To anticipate a claim, a prior art reference
 8 must expressly or inherently disclose each claim limitation, and must do so in the same way that
 9 the limitations are recited in the claims. *See Net MoneyIN, Inc.*, 545 F.3d at 1371. The Iacoponi
 10 ’592 claims require that a metal silicide be exposed to nitrogen plasma. *See* ’592 at claim 1. In
 11 contrast, Hillman’s process exposes titanium to nitrogen plasma. *See* Hillman ’912 at 15:29-33;
 12 *see also* Glew Decl. ¶¶38, 39, 44, 47. Titanium is different than titanium silicide—one is a metal,
 13 the other is a metal silicide. *See* Glew Decl. ¶¶12-13, 44. This critical difference means that
 14 Hillman ’912 does not disclose each and every limitation of the asserted Iacoponi ’592 claims—
 15 and therefore cannot anticipate.

16 **A. Hillman does not expressly or inherently describe the claimed step of**
 17 **“exposing” the metal silicide to nitrogen ionized in a plasma.**

18 1. Samsung has failed to establish express disclosure of Iacoponi’s method.

19 Hillman ’912 does not anticipate because Hillman does not expressly describe the claimed
 20 step of exposing the metal silicide layer to nitrogen ionized in a plasma. A prior art reference
 21 anticipates only if it discloses each and every claim limitation. *See RCA Corp. v Applied Digital*
 22 *Data Sys., Inc.*, 730 F.2d 1440, 1444 (Fed. Cir. 1984). Iacoponi ’592 claim 1 requires that the
 23 layer of metal silicide is exposed to nitrogen plasma. ’592 at 4:37-38. Claim 4 adds a limitation
 24 where that metal silicide is a “titanium” silicide. ’592 at 4:57-59. Hillman ’912 does not
 25 expressly disclose Iacoponi’s claimed step of exposing a metal silicide, in particular a titanium
 26 silicide, to nitrogen plasma.

27 The portion of column 15 that Samsung relies upon is:
 28

1 An integrated contact metalization process can be used by first
2 depositing titanium onto a silicon surface by PECVD. This will
3 form a layer of titanium silicide. After the titanium deposition an
4 ammonia plasma anneal is performed to provide an upper layer of
5 nitrided silicide titanium. Finally, a titanium nitride layer can be
6 deposited by PECVD, again in the same reaction chamber. Finally,
7 following the deposition of the titanium nitride, aluminum or
8 tungsten metal can be sputter deposited.

9 Hillman '912 at 15:29-37. The plain language of this disclosure does not expressly state that
10 titanium silicide is exposed to nitrogen ionized in a plasma.

11 The scope of a prior art patent's disclosure must be evaluated through the eyes of one of
12 ordinary skill in the art. *See Scripps Clinic & Res. Found. v. Genentech, Inc.*, 927 F.2d 1565,
13 1576 (Fed. Cir. 1991) ("There must be no difference between the claimed invention and the
14 reference disclosure, as viewed by a person of ordinary skill in the field of the invention."). As
15 viewed through the eyes of one of ordinary skill, Hillman's disclosure of an "ammonia plasma
16 anneal" does not expressly state that a layer of titanium silicide is exposed to the plasma. *See*
17 *Glew Decl.* at ¶¶8, 47; *see also Zimmerman Decl. Ex. 6* (setting forth AMD's proposed level of
18 ordinary skill in the art); Section V.A.2 below (demonstrating that Hillman '912 does not
19 necessarily result in a layer of titanium silicide being exposed to nitrogen plasma). Instead, one
20 of ordinary skill understands that Hillman's titanium silicide can be covered by titanium at the
21 time the plasma is initiated. *See Glew Decl.* ¶47. In that case, only the titanium is exposed to the
22 plasma. *See id.* That is not the same as Iacoponi's claimed method and therefore does not
23 expressly anticipate.

24 Nor does Hillman's statement that the ammonia plasma anneal results in a layer of
25 "nitrided silicide titanium" expressly disclose Iacoponi's step of exposing titanium silicide to
26 plasma. *See Glew Decl.* at ¶48; *see also* Section V.A.2 below. Neither Samsung's Motion nor
27 the Thomas Declaration state that Hillman '912 expressly discloses the step of exposing titanium
28 silicide to nitrogen ionized in a plasma. *See Samsung's Motion; see also Thomas Decl.* ¶¶22-23.
Without admissible evidence of express disclosure, Samsung cannot prove that a person of
ordinary skill in the art would find such an express disclosure in Hillman.

2. Samsung has failed to establish inherent disclosure of Iacononi's method.

Samsung cannot establish inherent disclosure because Samsung cannot show that Hillman's column 15 process "necessarily" results in titanium silicide being exposed to nitrogen ionized in a plasma. "Inherent anticipation requires that the missing descriptive material is 'necessarily present,' not merely probably or possibly present, in the prior art." *Trintec Indus.*, 295 F.3d at 1295 (citations omitted); *see also Electro Med. Sys.*, 34 F.3d at 1052 ("The mere fact that a certain thing *may result* from a given set of circumstances is insufficient to prove anticipation."). Samsung, through its expert Dr. Thomas, relies on two aspects of Hillman's column 15 process to imply inherent disclosure. First, the Thomas Declaration implies that depositing titanium on a silicon surface necessarily results in the titanium being completely converted to titanium silicide. *See* Thomas Decl. ¶22. Second, Dr. Thomas interprets the phrase "nitrided silicide titanium" to mean that Hillman's plasma converts titanium silicide to titanium nitride. *See id.* Neither of those conclusory statements demonstrate inherent disclosure of the missing "exposing" step.

To appreciate why Hillman's titanium silicide is not necessarily exposed to Hillman's plasma, it is important to understand how titanium silicide forms when titanium is deposited on a silicon surface. When titanium is deposited on a sufficiently hot silicon surface, a thin layer of titanium silicide forms at the interface of the titanium layer and the silicon. *See* Glew Decl. ¶50; *see also* Hillman '912 at Abstract. The conversion of titanium to titanium silicide is the result of diffusion of the underlying silicon into deposited titanium. *See* Glew Decl. ¶50. During this reaction, silicon molecules from the silicon substrate diffuse, or "migrate" through and react with the titanium to form titanium silicide. *See id.*; *see also* Glew Ex. A. Time and temperature play significant roles in the rate at which silicon diffuses through titanium, and along with thickness determine the resulting quantity of titanium silicide that is formed. *See* Glew Decl. ¶51. Given enough time and sufficiently high temperatures, silicon can migrate all the way through the titanium—in which case the entire layer of titanium becomes titanium silicide. *See id.*

Hillman's column 15 does not describe any of the process variables that define the extent to which titanium silicide will form while Hillman's titanium is being deposited. *See* Hillman

1 '912 at 15:29-37; *see also* Glew Decl. ¶52. Without knowing the process variables, Samsung
2 cannot prove that silicon “necessarily” migrates all the way through Hillman’s titanium, such that
3 the entire titanium layer is converted to titanium silicide before the ammonia plasma anneal is
4 initiated. *See* Glew Decl. ¶52.

5 The process variables define the diffusion of silicon. For example, if one deposits a thick
6 layer of titanium on a relatively low-temperature silicon surface and then immediately exposes
7 the titanium to an ammonia plasma anneal, the silicon will not have migrated all the way through
8 the titanium before the plasma converts the top surface of the titanium into titanium nitride. *See*
9 Glew Decl. ¶53. In that case, the titanium silicide would be completely covered by titanium. *See*
10 *id.* Titanium, instead of the titanium silicide required by the Iaconi claims, is exposed to
11 nitrogen ionized in a plasma. *See id.* There could be no anticipation because Iaconi’s
12 “exposing” step is absent.

13 Using a plasma to convert titanium (instead of titanium silicide) is exactly what Hillman
14 '912 claimed. Hillman’s claims 1, 7, and 11 describe methods in which titanium is deposited on a
15 substrate. *See* '912 at 16:32-33; 16:65-67; 17:21-18:2; *see also* Glew Decl. ¶54. All three claims
16 are broad enough to encompass a silicon substrate; claim 11 specifically recites a silicon surface.
17 *See* '912 at 17:21-22. While all of the claims recite the step of depositing a titanium layer, none
18 of the claims say that the deposited titanium is converted to titanium silicide. *See* '912 at 16:32-
19 33; 16:65-67; 17:21-18:2; *see also* Glew Decl. ¶54.

20 Hillman’s independent claims 1, 7, and 11 recite the step of converting the deposited
21 titanium layer to titanium nitride. *See* '912 at 16:38-42; 17:1-3; 18:1-3; *see also* Glew Decl. ¶54.
22 Even claim 11, which specifically recites depositing titanium on a silicon surface, recites a
23 plasma converting *titanium* instead of titanium silicide. *See* '912 at 18:1-3. If the process of
24 depositing titanium on silicon always results in the entire titanium layer being converted to
25 titanium nitride, Hillman’s claims that convert titanium to titanium nitride would be nonsensical.
26 Hillman’s claims on the use of a plasma to convert titanium into titanium nitride establish that
27 Hillman’s column 15 process does not always result in a layer of titanium silicide being exposed
28 to a plasma. *See* Glew Decl. ¶54.

1 Hillman's specification teaches that titanium silicide forms during deposition, but
 2 Hillman's claims make it clear that Hillman's process is performed in such a way that titanium is
 3 left on top of the titanium silicide. *See* Glew Decl. ¶55; *see also* '912 at 16:38-42; 17:1-3; 18:1-3.
 4 Plasma conversion is restricted to the exposed portion of the surface layer. *See* Glew Decl. ¶¶33-
 5 34, 55. Hillman's claims demonstrate that the top layer in the Hillman process is (or, at a
 6 minimum, can be) titanium. Because Hillman's process does not "necessarily" result in a layer of
 7 titanium silicide being exposed to a plasma, Samsung cannot rely on this process to establish
 8 inherent disclosure. *See Trintec Indus.*, 295 F.3d at 1295.

9 Extrinsic evidence confirms that Hillman's titanium silicide layer can be covered by
 10 titanium. It is appropriate to consider extrinsic evidence when considering whether prior art
 11 inherently discloses a particular claim limitation. For example, in *SmithKline Beecham Corp. v.*
 12 *Apotex Corp.*, the Federal Circuit upheld a finding of inherent disclosure based on tests performed
 13 by expert witnesses to determine whether a particular chemical compound necessarily formed as a
 14 result of a prior art process. 403 F.3d 1331, 1343-1345 (Fed. Cir. 2005). Here, extrinsic evidence
 15 shows that when titanium is deposited according to the process described in Hillman '912, the
 16 titanium silicide layer can be covered by a layer of titanium.

17 Another Hillman patent, U.S. Patent 6,274,496 ("'496"), which incorporates the '912
 18 patent specification by reference, expressly states that the titanium silicide layer formed during
 19 Hillman's PE-CVD titanium deposition, using Hillman's parameters, is covered by titanium:

20 In an alternative embodiment of the present invention, an integrated
 21 contact metallization process is performed by first depositing
 22 titanium onto a silicon surface by PECVD, during which a layer of
 23 titanium silicide is formed between the silicon surface and the
 24 titanium film. After the titanium deposition, an ammonia or
 25 nitrogen plasma anneal is performed to provide an upper layer of
 26 nitrided silicide titanium. Finally, a titanium nitride layer is
 27 deposited by thermal CVD, again in the same reaction chamber.

28 Hillman '496 at 7:61-8:2 (emphasis added) (Zimmerman Decl. Ex. 3). This paragraph from the
 Hillman '496 patent is almost identical to the one that Samsung relies upon from the Hillman
 '912 patent. *See* Glew Decl. ¶57. However, the Hillman '496 patent makes clear that the layer of
 titanium silicide is covered by a layer of titanium. *See* Hillman '496 at 7:63-65, claim 23

1 (“during the step of depositing the titanium film forming a layer of titanium silicide between the
2 silicon wafer surface and the deposited titanium film.”); Glew Decl. ¶57. Thus, as the Hillman
3 ’496 patent confirms, the substance being exposed to Hillman’s plasma is titanium, not titanium
4 silicide. *See id.*

5 Samsung’s second argument for inherency relies on the phrase “nitrided silicide titanium”
6 to imply that titanium silicide is exposed to nitrogen plasma. Samsung’s Motion at 9, citing
7 Thomas Decl. ¶22. That reliance is misplaced. The phrase “nitrided silicide titanium” does not
8 require that silicon migrates completely through the titanium layer to convert it to titanium
9 silicide before the plasma is initiated and the titanium nitride layer is formed. Glew Decl. ¶58.

10 “Nitrided silicide titanium” is not a commonly used term of art. Glew Decl. ¶59. At a
11 minimum, the phrase is susceptible to more than one interpretation. *See id.* In addition to the
12 meaning assumed by Samsung, the phrase can also refer to the silicidation of previously-formed
13 titanium nitride—which can occur under sufficiently high temperatures such as an anneal. *See id.*
14 Hillman’s column 15 does not include any of the process variables that would allow a person of
15 ordinary skill to determine whether or not silicon would migrate into the titanium nitride layer.
16 *See id.* However, if Hillman’s process is performed using sufficiently high temperatures, silicon
17 could migrate into the titanium nitride layer.³ *See id.*

18 “Nitrided silicide titanium” could also refer to a composite layer consisting of titanium
19 nitride and titanium silicide layers, with or without an intermediate titanium layer. Glew Decl.
20 ¶61. This is consistent with the use of that phrase in Hillman’s ’496 patent. *See Hillman ’496 at*
21 *7:61-8:2.* There, use of the phrase “nitrided silicide titanium” does not mean that titanium silicide
22 is exposed to plasma. *See id.; see also Glew Decl. ¶61.* Instead, the phrase “nitrided silicide
23 titanium” describes a stratified layer created when a plasma converts titanium to titanium nitride,
24

25 ³ There is no anticipation even if silicon migrated far enough into the layer of titanium nitride
26 formed by the plasma to be exposed to the plasma. The claim language, which requires
27 conversion of metal silicide to a first metal nitride, would not be satisfied. *See Iacoponi ’592*
28 *claims 1 and 4; see also Glew Decl. ¶60.* As set forth above, this would be siliciding a
previously-nitrided layer. *See Glew Decl. ¶60.* The claims require that metal silicide be nitrided,
not that a metal nitride layer be silicided. *See Iacoponi ’592 claims 1 and 4; see also Glew Decl.*
¶60. In any event, Samsung has provided no evidence that such exposure would occur.

1 while an anneal slowly converts the remaining titanium to titanium silicide. *See* Glew Decl. ¶61.
2 This evidence squarely rebuts the unsupported, conclusory assumption by Samsung’s expert that
3 the phrase “nitrided silicide titanium” refers to a layer of titanium silicide that is converted into
4 titanium nitride. *See* Thomas Decl. ¶22.

5 Samsung has failed to show by clear and convincing evidence that the process described
6 at column 15 of Hillman ’912 expressly or inherently discloses the claimed step of “exposing said
7 metal silicide layer to nitrogen ionized in a plasma.” Because Samsung did not establish by clear
8 and convincing evidence that each and every claimed step is expressly or inherently disclosed,
9 Samsung’s motion for summary judgment of anticipation must be denied.

10 **B. The process described at Hillman column 3 does not disclose Iacoponi’s**
11 **claimed method.**

12 The process briefly described at column 3 of the Hillman ’912 patent does not anticipate
13 because it does not describe each and every step recited in the Iacoponi ’592 patent. If even one
14 claimed step is missing, then this disclosure does not anticipate. *See Net MoneyIN*, 545 F.3d at
15 1371.

16 The process at Hillman ’912 column 3 does not anticipate because it does not disclose all
17 claimed steps. For example, column 3 does not expressly or inherently specify that titanium
18 silicide, as opposed to titanium, is exposed to the plasma. *See* ’912 at 3:47-53; *see also* Glew
19 Decl. ¶62. Thus, column 3 fails to disclose the “exposing” method step for the same reasons as
20 the process of column 15, above. Column 3 also does not describe Iacoponi’s last step, in which
21 a second metal (tungsten) is deposited on top of the second metal nitride layer. *See* ’912 at 3:47-
22 53; *see also* Glew Decl. ¶62. Thus, the generic process described in column 3 of Hillman ’912
23 falls woefully short of anticipating any asserted claims of the ’592 patent.

24 Samsung’s Motion and the Thomas Declaration do not provide evidence that the process
25 of column 3 discloses all claimed steps. Instead, Samsung relies on the column 3 process to
26 bolster its argument that Hillman discloses the second step of Iacoponi claim 1 “exposing said
27 metal silicide layer to nitrogen ionized in a plasma, thereby converting a portion of said metal
28 silicide layer to a first metal nitride layer.” *See* Samsung’s Motion at 9. Samsung made no effort

1 to identify any of the other claim limitations in Hillman’s meager column 3 process description.

2 It is clear from Samsung’s Motion that Samsung intended to fill the gaps in the process
3 described at Hillman ’912 column 15 with the disclosure of column 3. That strategy of “picking”
4 and “choosing” unrelated processes from different parts of a prior art reference has been soundly
5 rejected by the Federal Circuit. *See Net MoneyIN*, 545 F.3d at 1371 (citing *In re Arkley*, 455 F.2d
6 at 587) (“[T]he [prior art] reference must clearly and unequivocally disclose the claimed
7 [invention] or direct those skilled in the art to the [invention] without any need for picking,
8 choosing, and combining various disclosures not directly related to each other by the teachings of
9 the cited reference.”).

10 Where a party seeks to combine disparate disclosures from the same prior art patent, the
11 Federal Circuit requires that the party asserting anticipation provide evidence that specifically
12 links the disclosures. *See, e.g., Ecolochem, Inc. v. S. Cal. Edison Co.*, 227 F.3d 1361, 1369 (Fed.
13 Cir. 2000). In *Ecolochem*, the Federal Circuit reversed a district court’s anticipation holding.
14 The district court’s holding was based on the combination of a patent figure and accompanying
15 text, which taught some portions of the claim, in conjunction with a separate passage discussing
16 other aspects of the claim. *Id.* The Federal Circuit concluded that the reference could not
17 anticipate because there was no link between the text and figure on one hand and the general
18 discussion elsewhere in the specification on the other. *Id.; see also Net MoneyIN*, 545 F.3d at
19 1370. Even though the Federal Circuit found that the reference as a whole disclosed all elements
20 of the claim, it did not contain a discussion linking the two disparate disclosures, and thus did not
21 show the invention arranged as in the claim. *Id.; see also Net MoneyIN*, 545 F.3d at 1370.

22 Like the defendant in *Ecolochem*, Samsung failed to provide any admissible evidence
23 linking the two disparate portions of Hillman’s specification. It was Samsung’s burden to do so
24 by clear and convincing evidence. *See Ecolochem*, 227 F.3d at 1369. As the non-moving party,
25 AMD is entitled to the factual inference that these two disparate disclosures are not linked.
26 *Anderson*, 477 U.S. at 254.

27 Finally, Samsung’s Preliminary Invalidity Contentions did not cite column 3 as the source
28 of any allegedly invalidating disclosures. *See Appendix A1 to Samsung’s Preliminary Invalidity*

1 Contentions (Zimmerman Decl. Ex. 4). Samsung was required to do so under Patent L.R. 3-3(c)
2 (requiring party asserting invalidity to identify where “specifically” each element is found in the
3 prior art). This Court has rejected invalidity defenses not properly disclosed in Invalidity
4 Contentions. *See, e.g., ACCO Brands, Inc.*, 592 F. Supp. 2d at 1215 (rejecting invalidity theory
5 not presented in Preliminary Invalidity Contentions). This is a separate ground to refuse
6 Samsung’s new invalidity theory.

7 Samsung failed to show that the disclosure of Hillman’s column 3 expressly or inherently
8 discloses each and every limitation of any asserted Iacoponi claim. Samsung failed to provide
9 evidence that Hillman’s column 3 is linked to the process described in column 15. Even if it
10 could show that linkage, Samsung failed to show that the combination of columns 3 and 15
11 discloses each and every limitation of the asserted Iacoponi claims. For each of these reasons,
12 Samsung’s Motion for Summary Judgment of anticipation must be denied.

13 **VI. SAMSUNG FAILED TO PROVE OBVIOUSNESS**

14 Samsung has failed to set forth any admissible evidence to support Samsung’s contention
15 that Hillman ’912 renders obvious the claims of the ’592 patent. For example, Samsung offered
16 no evidence sufficient to allow the Court to determine the relevant level of skill in the art, no
17 evidence regarding the motivation to combine Hillman ’912 with features from the prior art, and
18 no evidence regarding any motivation to combine the various disclosures within the Hillman
19 reference itself. Furthermore, Samsung failed to disclose its obviousness defense as required by
20 the Patent Local Rules. Any one of these reasons would be sufficient to deny Samsung’s Motion.

21 **A. Samsung has never properly disclosed an obviousness argument.**

22 Samsung should be barred from moving for summary judgment on a defense that
23 Samsung has not previously disclosed to AMD. In particular, Samsung failed to properly
24 disclose an obviousness defense in its Preliminary Invalidity Contentions. Having failed to
25 properly disclose this defense, this Court should bar Samsung’s attempt to spring this new
26 argument on AMD in summary judgment.

27 Samsung’s entire obviousness theory based on Hillman is contained in one solitary
28 sentence from the Hillman ’912 chart attached to Samsung’s Preliminary Invalidity Contentions:

1 All asserted claims are anticipated by the Hillman '912 patent
2 and/or are rendered obvious by it, either alone or in combination
3 with other prior art described below and/or listed in Section I of
4 Defendants' and Counterclaimants' Preliminary Invalidation
5 Contentions and/or through modifications described below.

6 *See* Appendix A1 to Samsung's Preliminary Invalidation Contentions (Zimmerman Decl. Ex. 4).
7 Samsung's Preliminary Invalidation Contentions list more than 50 alleged prior art references that
8 Samsung contends are relevant to the Iacoponi '592 patent. *See* Samsung's Preliminary
9 Invalidation Contentions at 3-6 (Zimmerman Decl. Ex. 5). Samsung's disclosure fails to supply
10 even the most basic details about Samsung's obviousness theory. For example, the Patent Local
11 Rules specifically require Samsung to identify the motivation to combine. *See* Patent L.R. 3-3(b).
12 Samsung's chart for the Hillman '912 reference is silent regarding specific support of any alleged
13 motivation to combine Hillman '912 with any of Samsung's other references.

14 This Court has rejected invalidity defenses not properly disclosed in Invalidation
15 Contentions. *See, e.g., ACCO Brands, Inc.*, 592 F. Supp. 2d at 1215 (rejecting invalidity theory
16 not presented in Preliminary Invalidation Contentions). Because Samsung did not adequately
17 disclose this theory in its Preliminary Invalidation Contentions, Samsung should not be allowed to
18 argue it in a motion for summary judgment.

19 **B. Samsung failed to provide admissible evidence in support of any of the facts**
20 **underlying obviousness.**

21 Samsung failed to support its obviousness defense with any admissible evidence.
22 Samsung's expert declaration does not mention obviousness. Absent is any evidence regarding
23 motivation to combine, the level of ordinary skill in the art, or even the source of any missing
24 features. *See* Thomas Decl. Having failed to support its Motion with evidence, Samsung has not
25 met its initial burden as the moving party to "present evidence that, if uncontroverted at trial,
26 would entitle it to prevail on that issue." *See Monolithic Power Sys., Inc.*, 476 F. Supp. 2d at
27 1149. Samsung's Motion should be denied based on Samsung's failure to establish a prima facie
28 case of obviousness. *Id.* at 1154 (denying motion for summary judgment of invalidity where
moving party did not establish a prima facie case of unpatentability).

Instead of providing admissible evidence, Samsung cites the *non-precedential* opinion in

1 *Tokyo Keiso Co., Ltd. v. SMC Corp.*, 2008-1045, 2008-1112, 2009 WL 59769 (Fed. Cir. Jan. 9,
2 2009), for the unremarkable notion that a single prior art reference can render claims obvious.
3 *See* Samsung’s Motion at 11. Unlike Samsung’s Motion, the defendant in *Tokyo Keiso* supported
4 its motion for summary judgment with admissible evidence on the fact questions underlying
5 obviousness. *See, e.g., Tokyo Keiso Co., Ltd. v. SMC Corp.*, 533 F. Supp. 2d 1047, 1055 (C.D.
6 Cal. 2007) (relying on Lynnworth declaration to support findings of facts underlying
7 obviousness); *see also* Declaration of Lawrence C. Lynnworth in Support of SMC’s Motion for
8 Summary Judgment of Invalidity (Obviousness) (Zimmerman Decl. Ex. 7). This is critical
9 because, while it is ultimately a legal conclusion, obviousness must be decided based on
10 underlying facts. *Eolas Techs. Inc.*, 399 F.3d at 1332.

11 In *KSR*, the Supreme Court noted that the relevant factual inquiries were performed based
12 on evidence and stipulations provided by the parties during summary judgment briefing. *See*
13 *KSR*, 550 U.S. at 412-413 (noting that parties provided evidence of and stipulations regarding the
14 level of ordinary skill in the art). While *KSR* eliminated the rigid application of the “teaching-
15 suggestion-motivation” test, it did not eliminate the requirement that the party asserting
16 obviousness establish the underlying facts by clear and convincing evidence.

17 *KSR* explained that summary judgment of obviousness is appropriate where there is no
18 material dispute regarding: (1) the scope of the claims; (2) the level of ordinary skill in the art;
19 and (3) the content of the prior art. *See KSR*, 550 U.S. at 427. It does not appear that there is any
20 material dispute about the scope of the asserted claims. There is no way to know whether there is
21 a dispute about the level of ordinary skill in the art because Samsung has failed to provide any
22 admissible evidence to establish that fact. Even if the level of skill and scope of the ’592 claims
23 are not in dispute, summary judgment is inappropriate because there is a material dispute
24 regarding the scope of Hillman’s content. Samsung says that Hillman discloses the step of
25 exposing titanium silicide to nitrogen ionized in a plasma. *See* Samsung’s Motion at 10-11
26 (arguing that Iacoponi is obvious because Hillman “is identical to the asserted claims.”) AMD
27 disagrees—for at least the reasons described in Section V.A.2 above, Hillman is certainly not
28 “identical to the asserted claims.” *See also* Glew Decl. ¶¶24, 36-41, 44-62. This material dispute

1 regarding the scope of Hillman’s content demonstrates that Samsung has not met its burden of
2 establishing the facts underlying obviousness by clear and convincing evidence.

3 In addition, Samsung provided no admissible evidence that would assist the Court in
4 evaluating any motivation to combine Hillman with itself (or any other reference) that supplies
5 the missing elements. While *KSR* found that a “rigid” application of the teaching-suggestion-
6 motivation test was inappropriate, it nevertheless posed the following “proper” question:

7 The proper question to have asked was whether [one] of ordinary
8 skill, facing the wide range of needs created by developments in the
9 field of endeavor, would have seen a benefit to upgrading [the prior
10 art] with [the missing feature].

11 *KSR*, 550 U.S. at 424. Samsung provided no evidence of the needs created by developments in
12 the field. Samsung provided no evidence about whether one of skill would have seen a benefit to
13 upgrading Hillman’s process with the missing features. Samsung did not even identify what
14 feature is missing from Hillman. The facts required to perform this inquiry are utterly absent
15 from Samsung’s Motion and supporting declarations. Without such evidence, Samsung has not
16 established facts that “would entitle it to prevail on that issue.” See *Monolithic Power Sys., Inc.*,
17 476 F. Supp. 2d at 1149.

18 Samsung bears the burden of establishing all facts to support its obviousness defense by
19 clear and convincing evidence. *Ashland Oil v. Delta Resins & Refractories*, 776 F.2d 281, 292
20 (Fed. Cir. 1985) (citations omitted). Having failed to do prove *any* of the facts underlying
21 obviousness, much less establishing such facts by clear and convincing evidence, Samsung’s
22 Motion must be denied.

23 CONCLUSION

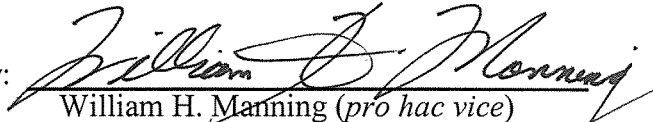

24 Samsung failed to show that Hillman ’912 expressly or inherently discloses each and
25 every limitation of the ’592 patent. Samsung did not offer any admissible evidence in support of
26 its motion for summary judgment of obviousness. In both cases, Samsung failed to meet its
27 burden of establishing invalidity by clear and convincing evidence. Therefore, AMD respectfully
28 requests that this Court deny Samsung’s Motion.
